

Town-Wide Sanitary Sewer Evaluation Study Work to Begin

The Town of Southington is working with Tighe & Bond Engineers to identify sources of infiltration and inflow (I/I) within the Southington Sewer System as the second phase of an overall collection system study.

What is I/I?

I/I consists of both groundwater entering the sewer line through open joints in the sewer pipe, as well as rainwater which can enter the sewer system through connections such as roof leaders, sump pumps and catch basins. Examples are as shown in the diagram.

The Town would like to remove these sources of excess flow to prevent backups or overflows in the sewer system, as well as reducing operating expenses at the Water Pollution Control Facility.

On Wednesday, April 15, 2015 the first phase of the field work will commence with television inspection of the sewer lines. This work is expected to be completed by mid-June.

The Town's contractor, A & C Connection Inspection, LLC will be conducting the TV inspection during the daytime hours. No action is necessary on your behalf and no interruptions to your sanitary sewer service are expected. The Town of Southington police and/or certified flaggers will provide traffic control as necessary throughout the project. Engineering Department personnel will be notified on a daily basis of the work locations, which will be posted daily on the Town's website.

If you have any questions or concerns, please do not hesitate to contact Keith Hayden, Director of Public Works, or James Grappone, Assistant Town Engineer at 860-276-6231.
