Re: IW #1289; Southington- Cheshire YMCA, 1000 East Street
Date: 5/4/21

The applicant is seeking approval for disturbance associated with sediment removal of Sloper Pond. This updated permit will replace IW #1203 which is currently active and would expire in October of 2022. The difference is the proposed method of sediment removal; mechanical vs. suction dredge. The suction dredge is apparently more environmentally friendly and encouraged by DEEP according to the applicant. The previous stipulations can be carried over as dewatering will still be necessary along with other site operations associated with the work.
